Full Stack Developer (Frontend Leaning) with 5+ years of experience building and maintaining web applications for international clients in agile environments. Specialising in JavaScript, HTML5, CSS/Sass, with interest in React, TypeScript and Tailwind CSS, and a solid background in PHP, WordPress and Drupal on the backend. Full working rights in Australia, committed to writing scalable, maintainable and accessible code with a proven ability to take initiative, solve problems independently, and deliver polished, detail-oriented work.

SKILLS

Frontend: JavaScript, React, TypeScript, HTML5, CSS3, Sass/SCSS, Tailwind CSS, Responsive Design, Cross-browser Compatibility

CMS: WordPress, Drupal

Backend: PHP, REST APIs

Tools & Practices: Git, Agile Methodologies, Jira, Confluence, Trello, Code Reviews, Performance Optimisation, Security best practices, Version Control, Safety Standards, Teamwork

EXPERIENCE

Sabbatical | Brisbane, Australia

December 2024 – Present

- Relocated from Colombia to Australia, obtained full working rights, and took an intentional break after 5+ years of continuous work in software development. Used this time to settle in and explore modern frontend development building a personal portfolio (SPA) and other technical projects using React, TypeScript and Tailwind CSS.

Cafeto Software | Software Developer

June 2018 – September 2024

Ventrix Advertising | **October 2022 – September 2024**

- Took ownership of custom themes and features in more than 6 WordPress sites for US-based clients across different time zones, collaborating with designers to produce accessible pages using JavaScript, PHP, and Sass, with a focus on code quality and maintainability.
- Refactored Gutenberg Blocks to improve reliability and maintainability of core functionality, reducing technical debt across multiple projects.
- Collaborated with stakeholders and a cross-functional team to validate requirements and deliver solutions aligned with business needs.
- Participated in brainstorming sessions to propose technical solutions and improvements.

PROS Inc. | **June 2018 – October 2022**

- Contributed new features and improvements to a live, large-scale, interconnected Drupal self-service support portal (PHP + JavaScript) used by PROS customers worldwide, maintaining high standards of code quality and reliability throughout.
- Integrated Jira Service Desk and Jira Software REST APIs to streamline ticket management and improve traceability between customer issues and internal workflows.
- Participated in QA and UAT phases to ensure system stability before deployment.

Best Technologies | Software Developer

November 2017 – June 2018

- Developed new features and resolved issues in a Java desktop application and PHP web app used to manage visitor access across multiple corporate facilities.
- Integrated USB barcode scanner functionality to automate ID scanning, eliminating data entry and streamlining entry tracking.

CIAT (International Centre for Tropical Agriculture) | Intern

August 2016 – February 2017

- Contributed to the development and improvement of two Android mobile applications (Java, SQLite) used to manage the reception and processing of germplasm (bean seeds) in the Genetic Resources area.
- Implemented barcode scanning and data-capture flows to streamline reception processes, reducing manual input and the risk of data inconsistencies.
- Updated local database structures and synchronisation logic using RESTful web services with an Oracle backend.

EDUCATION

Universidad del Valle | Bachelor of Engineering, Systems Engineering 2017 | Cali, Colombia
